## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 2-12, drawn to *Hypermedia*, classified in class 715, subclass 501.1.
  - II. Claims 13-48, drawn to *Multi-computer Data Transferring – Master/Slave Computer Controlling*, classified in class 709, subclass 208.
  - III. Claim 49-76, drawn to *Multi-computer Data Transferring*, classified in class 709, subclass 200.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed, and the subcombination has separate utility because:

Group I deals substantially with hyperlinks and device buttons as applied to a Web page (hypermedia).

Group II deals substantially with accessing network devices for activating controllable functions within said devices (master/slave computer controlling).

Group III deals substantially with transferring various data between computers in a network (multi-computer data transferring).

Art Unit: 2176

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
